Presentation

Operator

Good day, ladies and gentlemen, and welcome to the Arch Capital Group's First Quarter 2017 Earnings Conference Call. [Operator Instructions] As a reminder, this conference call is being recorded. Before the company gets started with its update, management wants to first remind everyone that certain statements in today's press release and discussed on this call may constitute forward-looking statements under the Federal securities laws. These statements are based upon management's current assessments and assumptions and are subject to a number of risks and uncertainties.

Consequently, actual results may differ materially from those expressed or implied. For more information on the risk and other factors that may affect future performance, investors should review periodic reports that are filed by the company with SEC from time to time. Additionally, certain statements contained in the call that are not based on historical facts are forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995.

The company intends the forward-looking statements in the call to be subject to the Safe Harbor created thereby. Management also will like -- will make reference to some non-GAAP measures on financial performance. The reconciliation to GAAP and definition of operating income can be found in the company's current report on Form 8-K furnished to the SEC yesterday, which contains the company's earnings press release and is available on the company's website.

I would now like to introduce your host for today's conference, Mr. Dinos Iordanou, Mr. Marc Grandisson and Mr. Mark Lyons. Sirs, you may begin.

Constantine P. Iordanou

Chairman and Chief Executive Officer

Thank you, Chanel. Good morning, everyone, and thank you for joining us today. This is our first quarter to include the combined results of Arch MI and United Guaranty and we are very pleased with the early days of our integration process. Mark will discuss the integration in more details in a few minutes, but let me say that we are happy with the progress achieved in the first quarter.

Although it is still early, we are very pleased with the resilience of the United Guaranty Corporation's customers as they make the transition to our systems and platform, maintaining the strong relationships they achieved with United Guaranty over the years. As we discussed last quarter, our guiding principles for the integration of these companies is to find and deploy the best parts of each organization on a going forward basis. I am referring not only to a most important resource, the people, who come to work for us every single day, but I'm also including the operating systems, pricing approach and algorithms, along with all back office functions like they provide customer service.

Our #1 task is to create a high-quality experience for our customers as we continue to enhance Arch MI's position as a market leader that should earn good returns through the cycle and for many years to come. One additional benefit or opportunity that comes to Arch as a result of the acquisition of United Guaranty is the opportunity for us to move our headquarters of our Global Services Group to North Carolina. Our Global Services Group manages a lot of the back office work for our insurance, reinsurance and mortgage businesses and consolidating the operations over time in 1 location increases our flexibility to fill jobs that are lost through attrition in other parts of the country to a lower cost environment.

Now turning to first quarter results. Our reported combined ratio on a core basis, Mark will define that in a moment, improved by 7.7 points from the first quarter of 2016, led by excellent results in the mortgage segment, offset by the effects of higher attritional and catastrophe losses in our Property and Casualty segments. Accident year results declined in both our insurance and reinsurance segments, reflecting soft market conditions. Our mortgage segment improved its accident year combined ratio quarter-over-quarter to 50.4% from 65.8%, 15.4 points of improvement in the first quarter of 2016 year as the tailwinds of better credit quality and scale drove excellent profitability at Arch MI U.S.

Tellingly, our mortgage segment went from representing only 7.4% of net earned premiums on a core basis in the first quarter last year to 24.6% for the first quarter this year, nearly identical to the earned premium for our reinsurance segment in the first quarter of 2017. Loss reserve development remained favorable in each of our segment, which in the aggregate reduced our combined ratio by 8.5 points. There are no significant changes in the Property Casualty operating environment from last quarter. Marc Grandisson will elaborate on what we see in each of these markets in a few minutes. On an operating basis, we produced an annual return on equity of 10.3%, while on a net income basis, we earned a return on equity of 12.6% for the first quarter of 2017.

Net investment income per share for the first quarter was \$0.69 per share, up \$0.13 sequentially from the fourth quarter of 2016, primarily due to the assets that came over with the acquisition of United Guaranty. Our annualized pretax investment income yield was 2.13% for the first quarter of 2017, just slightly above the level observed in the fourth quarter of 2016. As you know, we manage our investment portfolio on a total return basis, which on a local currency basis, was up 170 basis points for the quarter and 164 basis points if we exclude the effects of foreign exchange.

Our book value per common share at March 31, 2017, was \$57.69 per share at 4.5% increase from the fourth quarter of 2016 and a 16.4% increase from the first quarter of last year. Mark Lyons will give more details on the components of the change in book value per share in a few minutes.

Before I turn the call over to Marc Grandisson, I would like to discuss our PML's, which declined modestly from January 1. As of April 1, 2017, our largest 2015 year PML for a single event in the Northeast was down to \$473 million or 6% of common shareholders equity. This is the lowest we ever had it in our history. Our Gulf of Mexico PML was at \$383 million and our Florida Tri-County PML decreased to \$386 million.

I will now turn it over to Marc Grandisson to comment on our operating units and market conditions. Marc? Over to you.

Marc Grandisson

President and Chief Operating Officer

Thank you, Dinos, and good morning to you all. Before I review market conditions across our segments, I am pleased as Dinos, alluded to earlier to report that the integration of UG and Arch MI is going very well with a focus on high customer service to maintain or improve our relationships. While the strength of the combined entities is already apparent, we're working diligently to unify the U.S. MI operations and most notably, we have decided to base our U.S. mortgage interest headquarters in North Carolina. We believe that there will be opportunities and additional opportunities to realize efficiencies without jeopardizing our customer relationships and we will keep you informed as those efforts materialize over the next several quarters.

At the end of our first quarter, as a combined global MI company, our expense ratio for the segment declined to 29%. Over the next few years, we are targeting a mid-20's expense ratio in the segment as the business matures. Our New Insurance Business or NIW was \$12.7 billion for the first quarter, an increase of 8% over the same quarter in 2016 on an additive combined basis. We estimate that Arch U.S. MI's market share remained in the mid-20s for the first quarter of 2017, consistent on a pro forma basis with a 26% market share indicated last quarter. The current premium yield was essentially unchanged with the last quarter's level. Over 75% of our NIW came through our risk-based pricing platform. Rising interest rates in the fourth quarter reduced the volume of refinance activity. And accordingly, led to an improved level of persistency, which came in at 77%. The purchase market accounted for 85% of our volume this quarter.

The overall quality of the risk written is still very strong and stable, with average FICO scores of 743 and our monthly single mix at 82% and 18%, respectively, meeting our post-acquisition objectives in the quarter. Arch also continued to build on its position in the U.S. GSE risk-sharing transaction with approximately \$2.2 billion of risk-in-force at the end of the first quarter 2017. Arch remained a lead market for this type of risk transfer execution.

Finally, our Australian mortgage insurance relationship continues to generate a good flow of business and contributed roughly \$4 million of profit for the quarter. As this business is all single-payment upfront, its contribution to profit should grow with time as premiums are earned over the life of the mortgages.

Moving on to the P&C insurance world, which represents 30% of our earned premium. As we have indicated on prior calls, market conditions remain challenging. Rate decreases have slowed somewhat, but are still broadly less than last trend. This is especially true for larger excess accounts, which tend to be more commoditized. The rate change differential between our segments is wide, reaching 410 bps in the U.S. for the first quarter, a positive 140 bps rate change for the lower volatility lines and a negative 270 bps for our cycle-managed business. As a result of that market economy, all of our P&C segments continue to move towards smaller accounts and more specialized areas of the market and are walking away from accounts when returns are not acceptable.

In our primary U.S. P&C insurance operations, we had margin erosion of 70 basis points for all lines in the first quarter. To borrow an expression from Dinos, we have seen what's cooking in the kitchen before and we don't like the taste of that meal.

Turning to reinsurance, which represents about 25% of our earned premium this quarter. It's a similar story and that we continue to focus on the few opportunities that have relative rate strength and more favorable returns, while we are deemphasizing the more commoditized segments as rates and loss trends continue to erode margins. Reflecting on the current trends in the broader reinsurance markets, I am reminded of the old adage that I heard often from Paul Ingrey, volume is vanity, profit is sanity. Allocating capital judiciously is the cornerstone of our corporate mandate. As we sit here today, mortgage represents 1/3 of our allocated capital, 25% of our net earned premium and 70% of our underwriting gains at a mid-to high-teens ROE. We're happy to have the flexibility to allocate capital across our 3 platforms to the markets which are generating good returns, and we believe that this flexibility allows Arch to generate alpha with more stable returns for its shareholders.

And with that, I'll hand this over to Mark to cover the detailed financial results.

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

Thank you, Marc, and good morning, everyone. Given that this is the first full quarter after the UGC acquisition, I'm going to provide more focus on that associated impact on the call today. First, I'll highlight just a few items about this quarter but as a reminder, the usual quarterly topics can be found in the earnings release in the associated Financial Supplements.

Okay. Now I'll make some summary comments for the first quarter, all on a core basis. As Dinos referenced earlier, the term core corresponds to Arch's financial results, excluding Watford Re, whereas the term consolidated includes Watford Re. So claims recorded in the first quarter from 2017 catastrophic events that have reinsurance recoverable and reinstatement premiums were \$12.3 million or 1.2 loss ratio points compared to 0.5% in the first quarter of 2016 on the same basis, mostly emanating from within our reinsurance segment. The activity was primarily driven by Australian Cyclone Debbie and various other smaller events around the globe. Again, we believe that this result continues to highlight our property cat underwriting discipline as actual reported losses on cat events continue to correlate with the exposure reductions that have been implemented over the last several years. As for prior period, pure net loss reserve development, approximately \$83 million of favorable development, was reported in the first quarter led by the reinsurance segment with approximately \$57 million favorable, the insurance segment of about \$2 million favorable and the mortgage segment providing nearly \$24 million of favorable development. Nearly all of the mortgage segment favorable development emanated from the U.S. portfolio and a meaningful portion or \$8.2 million, stemmed from favorable development resulting from subrogation recoveries on mostly second lien and other portfolios that came over as part of the UGC acquisition and that are, in fact, runoff operations. These subrogation recoveries have been reflected in UGC's historical results over time and could continue this year and in future years, depending upon the associated claims and management of the files.

The reinsurance segment, net favorable development, was across most underwriting years for short and medium tailed lines and predominantly from the 2003 to 2013 underwriting years for long-tailed lines. The calendar quarter combined ratio on a core and on Watford basis was 78.8% and when adjusting for cats in prior period development, the core accident quarter combined ratio was 86.1% compared to 92.4% in the first quarter of 2016.

The reinsurance segment, accident quarter combined ratio, excluding cats of 97.6% compared to the first quarter of 2016's 94.2%, while the insurance segment's accident quarter combined ratio excluding cats was 97.8% compared to 94.9% in the first quarter of 2016. Both results reflect higher loss specs due to current difficult market conditions. The reported insurance group accident quarter excluding cat loss ratio increased approximately 150 basis points quarter-over-quarter. And after controlling for large attritional losses and mix changes, increased approximately 70 bps, which Marc Grandisson referred to earlier.

Competitive conditions in the PC markets, however, were more than offset by the continued improved profitability of the mortgage segment, amplified with their net earned premium being a larger proportion of the total. The mortgage segment's accident quarter combined ratio improved 14.4 points, as Dinos referenced, quarter-over-quarter. And their net earned premium represented nearly 25% of the total core net earned premium compared to only 7.4% in the corresponding quarter of 2016. Remember that in the mortgage segment, accident quarter has a different connotation than in PC, and is more similar in concept to claims made businesses in the PC space since the notice of default defines the assignment to the appropriate quarter.

Similar to last quarter, there were some expense costs in the first quarter resulting from the UGC acquisition. You may recall that since the acquisition occurred at year-end 2016, only the balance sheet was impacted in the fourth quarter, not the income statement. This quarter, we have a full income statement reflection of the combined portfolios. As for the referenced expenses, the company incurred \$15.6 million of such pretax expenses related to the UGC transaction in the quarter as compared to \$25.2 million incurred serially in the fourth quarter of 2016. The sources of cost were different, however, as this quarter, the cost emanated from UGC acquisition-specific bonuses, severance and outplacement costs and trailing UGC transaction and legal costs. More specifically, the UGC-specific bonuses and transition compensation costs totaled \$6.8 million pretax and severance and outplacement costs totaled \$8.2 million, resulting from reduction in forced actions taken on January 31 and March 31, affecting approximately 205 employee positions and 60 contractors. The actual salary compensation recognized in the first quarter associated with these employees involved in the risk-in-force efforts was \$4.1 million. Given that the January 31 reduction to force only had 1 month of salary expense reflected in the quarter and the March 31 reduction in force had a full quarter of salary expense reflected, a \$5.7 million quarterly run rate savings of salary expense is anticipated.

We will comment in future quarters about any other actions taken and their financial impact, but these figures reflect only the impact of reductions in force that have already been implemented. Given the nature of these expenses, we have excluded them from operating income as they are not indicative for our true underlying performance. I'd also like to remind everyone that we issued 12.8 million approximately -- 12.8 million common equivalent shares to AIG as part of the UGC purchase price. They had an insignificant impact last quarter on average common shares outstanding, given the 12/31 closing date, but had a material impact this quarter as the diluted weighted average common shares outstanding increased to approximately 139 million shares this quarter versus 125.4 million in the fourth quarter of last year. I bring this up because I still see analyst reports and conversations still utilizing pre-common share equivalent numbers. We're using that in all our statistics and we recommend you do, too.

As a respect to the effective tax rate with our changing portfolio and geographic mix, I provided full year 2017 indications on the last call that the expected tax rate on pretax operating income would likely be in the low to mid-teens range. In the first quarter of 2017, our tax rate on pretax operating income was 14.4% with 100 basis points additional reductions of 13.4% stemming from a change in GAAP accounting affecting stock compensation.

I'd like to point out that we expanded our U.S. primary mortgage insurance disclosure in the financial supplement to provide enhanced information by book year or underwriting year for the PC analysts. For

loss reserves, insurance in force, risk-in-force and delinquency rates as well as aggregate NIW splits between monthly and single premium policies as well as providing our PMIER efficiency ratios on a consolidated U.S. MI entity basis.

I also want to highlight the difference between the U.S. primary mortgage division's gross versus net risk-in-force. At the end of the quarter, the gross risk-in-force is \$60.6 billion, whereas the net risk-in-force is 28% lower at \$43.6 billion. As we have consistently implemented in all our segments, our ongoing mortgage strategy is to maximize profitability while simultaneously protecting the balance sheet. The existing quarter shares that are in place, along with the existing and ongoing excess of loss and capital market protections provide this aggregate and tail risk balance sheet protection we see.

As for after-tax operating income EPS accretion realized in the first quarter of 2017 from the UGC acquisition, we examined our results with it and without the impact of the UGC acquisition, giving due consideration to associated debt financing interest costs, preferred stock dividend charges and intangible amortization. The realized beneficial accretion from the transaction was nearly 25% on a reported basis. And just to remind everyone, we have previously provided long-term operating income per share run rate accretion indications over a multiyear period of being in the 35% area.

It is important to reemphasize that this long-term reportable accretion is expected to accelerate, as the 2017 and later book years become more impactful on a net basis in future quarters and as the benefits for reductions in force and other actions such as duplicative system eliminations overtime are also realized in future quarters.

On a GAAP basis, at March 31, our total debt to total capital ratio was 20.6% and total debt plus preferred to total capital is 27.7%, which is down 100 basis points from year-end 2016. This leverage reduction was due to our growth in common equity as our debt and preferred levels were unchanged from year-end. Consolidated operating cash flows were down \$111 million relative to the first quarter of 2016. The first quarter operating cash flow was generally lower on a seasonal basis and the timings of higher retrocession and reinsurance premiums from our reinsurance and mortgage groups, respectively, drove a majority of that change. We did not purchase any shares during the first quarter of 2017 and don't anticipate repurchasing any during the balance of 2017.

As a reminder, our remaining authorization is \$446.5 million, which has been extended through year-end 2019. Dinos mentioned our growth to book value per share of 4.5% from last quarter. It's important to note that this stemmed from both strong underwriting and strong investment performance. And with these introductory comments, we're now pleased to take your questions.

Constantine P. Iordanou

Chairman and Chief Executive Officer
Operator, we're ready for questions.

Question and Answer

Operator

[Operator Instructions] And our first question comes from Geoffrey Dunn of Dowling & Partners.

Geoffrey Murray Dunn

Dowling & Partners Securities, LLC

I was hoping I could get a little bit more color on the incurred loss development in the MI side this quarter. First, can you give a better idea in terms of the improvement claim rates. Are you seeing that from your late-stage bucket or more of the mid and early-stage delinquencies?

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

I think on the U.S. side, you're going to see that -- remember that's kind of a report on quarter view and we're not seeing that or we're not recognizing it as much the more recent reported quarters as it would be for ones a little more aged. But I think, Geoff, part of what we might want to discuss, given the size of it is that -- and I mentioned that most of this is coming from the U.S. business. About \$1 million came from the -- on the reinsurance side, so it's kind of insignificant. But there was subrogation on a cash received basis, on the establishments to normalize our accounting policies between the 2 consolidated entities now, so subrogation reserves put up. These are normal course, but they were scattered between first lien and second lien and other portfolios that were there. And they've been there historically, they are now. The fact that they're -- most of it is in runoff doesn't mean that they're going to dissipate. They'll fall off a lot more slowly over time. So hopefully, that answers your question.

Geoffrey Murray Dunn

Dowling & Partners Securities, LLC

So your comment about the favorable role rates is more on the subrogation and HELOC exposure, not necessarily the primary book?

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

No. The primary book, yes. You're still seeing some improvement, but they're not coming from the 2016 report quarter, I believe it's 2015 and a little bit backwards.

Geoffrey Murray Dunn

Dowling & Partners Securities, LLC

Okay. So the 12 plus. All right. And then on the current period provision, can you give us an idea of the incidence assumption for the new notices and how that compares to maybe the pro forma result a year ago?

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

I actually don't have that in front of me, but -- so you're talking about the claim rate?

Geoffrey Murray Dunn

Dowling & Partners Securities, LLC

The initial claim rate assumption on the new notices.

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

Geoff, I think that's going to have to be something we channel back through Don Watson. Sorry, I simply don't have that in front of me.

Operator

And our next question comes from the line of Kai Pan of Morgan Stanley.

Kai Pan

Morgan Stanley, Research Division

So on the MI expense saving opportunities, it looks like if you look at legacy, Arch as well as UGC, the other operating expenses add up to about \$60 million. And this quarter it's down to \$40 million. Is that run rate going forward? Or there are say other opportunities? Or the other way to ask it is that you're talking a 25% expense ratio over time, now it's 29%. You think that improvements more coming from the absolute dollar amount reduction or more from the top line premium growth?

Constantine P. Iordanou

Chairman and Chief Executive Officer

Let me give it a shot, and I'll give it to Mark to get into the details. But we don't -- we didn't make projections even though, internally, we have certain things in mind because I want our teams as they integrate to do it in a fashion that improves our long-term opportunities to be as efficient and as effective without affecting customer service with our competitors. Having said that, okay, a lot of it is going to come from redundancy in personnel, that it would get eliminated over time. Mark gave you a number within the first quarter, we have eliminated approximately 270 positions. On April 1, there was an additional 97, which is going to be as part of our report card we're going to share with you in the second quarter, not knowing what else is going to happen in the second quarter because I'm not putting undue pressure on our people to hit certain numbers. Our instructions, Mark and I, is to do the right thing with the idea that if we don't need certain individuals, see if we can reassign them into other jobs, look as we lose in attrition in other parts of the organization. And that's one of the reasons we've even moved our global services headquarters down there because it allows us to manage the workforce in a much more efficient basis. And we're not just focusing on United Guaranty. We're looking at every operation and we do that as a matter, of course, independent if we made an acquisition or not. That's the prudent way of managing. In addition to that, you got to get into systems and back rooms and not just headcounts, but where does that headcount resides and is a cost differential. For example, a New York job is much more expensive than a North Carolina job and a job in the Philippines is even less expensive than a job in North Carolina. And we look at that as a global organization. So there will be additional savings. It's not that we don't know how to push the pencil and make calculations, but we don't like to promise things to influence good judgment. We rather report after we take the actions than trying to hit a particular number.

Marc Grandisson

President and Chief Operating Officer

And I think what I would add in terms of the question, the top line is not going to change significantly, just by virtue of being in MI portfolio. It's very sticky, it's very straightforward, lot of monthly's coming in depending on our market share, but for the remainder of the year, for the foreseeable future, we don't much change. So it's really, to answer your question more directly, which Dinos did, it's going to be really as a result of absolute dollar reduction as opposed to premium-related ratio.

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

As Marc alluded to, it wouldn't be felt as much in 2017, which is probably the model question you were asking. On a longer-term basis, as the impact of the AIG quota share, 50% quota share on '14, '15, '16 underwriting years starts to lessen and we're writing 2017, 2018, where it's a 100% without the quarter share coming in that will start to flip and you'll see increasing growth on a net basis per your denominator.

Constantine P. Iordanou

Chairman and Chief Executive Officer

Without changing the personnel, and you know the quota share has a 30% seep. So at some point, in time, that will reverse to a benefit. If -- and the 25% is not -- we think we're going to be, over time, below that number. But at some point in time, we said, hey, 25% is something that we're trying to achieve, 25% expense ratio, but it can even be better than that over time. All I want is efficient operations with good customer service. And at the end of the day, we want to not have an unlevelled playing field with that competition, so we monitor that. How they do things? Are they better than us? What things do we need to do to improve, and I don't want to have a structural disadvantage. And traditionally, over the last 15 years, we didn't allow that in our operations and we won't allow it in the MI space either.

Kai Pan

Morgan Stanley, Research Division

Great. Is there a restatement in terms about the legacy, like the Arch MI like expenses?

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

I guess there's 2 things you need to figure out. I wouldn't say there's a re-class associated with the intangible amortization, where, in the mortgage space, in others, we had it more above the line. Now we have below line. So because we -- it was our goal to be very, very transparent on the UGC intangible amortization, it only makes sense to make that a corporate-wide approach. So yes, so it would have been a reclass and that's why some of the prior year may look a tiny bit different than it was when you looked at the numbers last year. So it's a good catch.

Kai Pan

Morgan Stanley, Research Division

Okay. Lastly, just remind us what's the lockup period for the AIG preferred shares? And like do you have a capsuled flexibility or first right to repurchase that shares?

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

It is identical to when the SBA was signed, which is 1/3 at 6 months, 2/3 cumulatively at 12 months and 100% cumulatively at 18 months.

Kai Pan

Morgan Stanley, Research Division

And do you guys have the capital flexibility to participate?

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

Yes, we do.

Operator

And our next question comes from the line of Elyse Greenspan of Wells Fargo.

Elyse Beth Greenspan

Wells Fargo Securities, LLC, Research Division

When you guys announced this deal with UGC in August, you guys had said about 50% of earnings would come from P&C and mortgage. I know we had the underwriting income, which shifts to about 70% in mortgage. Would you say that the mortgage market has gotten better or the P&C market has gotten worse than the view that you had, I guess, when you announced this deal and laid out those metrics to us in August?

Constantine P. Iordanou

Chairman and Chief Executive Officer

Well, I mean, you look at it in the very short time. Let me -- in the short time, your question is -- and your conclusion is correct. I think the P&C, both insurance and reinsurance, has deteriorated because we're not getting rate increases to keep up with trend. So in essence, it's eroding, so that means you're going to write a little less than what you wanted to and the profitability might not be a little less than what you want to. Having said that, I think every indication on the MI space is that things are better. Delinquencies, they're better, and in essence, the credit box has not deteriorated. It's as good as it was at that time. So -- but you got to take our comments from the long term because we -- in everything that we do, we have a long-term view and we make judgments as to where we're going to play, how much capital and resources we're going to allocate on the long-term view. And right now, I can tell you, greenlight is on MI, amber, not red, but amber lights on the P&C, both insurance and reinsurance. Having said that, I can't predict the future. I don't know if the P&C cycle changes and at what time it's going to change. But I can tell you, don't forget, our rules, the P&C, and it doesn't mean we're not going to do a lot on the P&C space, given the right market opportunity. We're not reducing the group capability from an underwriting perspective. As a matter of fact, I think it's fair to say we have a bit of overcapacity in underwriting talent, which we're going to maintain. The course associated with that is insignificant when you weigh it versus the opportunity when the market turns. Is it going to turn 3 years from today, 3 years from today? I don't know. But I can tell you, when it does, we're going to know it. We're going to take advantage of it, and we will have the people. We're not going to be chasing people to take advantage of it. Anything you want to add, guys?

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

Yes. Just 1 quick thing because I think it's easy to get lost in the sauce. It's a good observation. That's the underwriting gain or loss, but each of those businesses have a little different durations. So reinsurance group may have more property cat, so the insurance group may have longer tailed lines, the higher proportion. They're bringing in more investable assets and so forth. So when you look at underwritings, you brought interest income in, it will be skewed a little bit.

Constantine P. Iordanou

Chairman and Chief Executive Officer

Different.

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

Differently away from mortgage.

Elyse Beth Greenspan

Wells Fargo Securities, LLC, Research Division

Okay, great. And then Dinos, following up on your comments, you mentioned loss trends on the property casualty side. Do you think if we start to see a higher level inflation, which it seems like you and some of your peers are pointing to, well, do you think the industry will take price to combat higher inflationary levels?

Constantine P. Iordanou

Chairman and Chief Executive Officer

I don't -- no -- you're thinking very logically, and that's a mistake in our business. The [indiscernible] at dry markets is fear and greed. And right now, I don't see greed out there. I see some concern, but I don't see fear. Yes, there is some concern. As a matter of fact, I think that canary in the coal mine is being commercial auto liability, who has a shortened tail, and is starting to percolate and bubble up in a lot of places. You see it on the writers of commercial auto. You see it in penetrations on the umbrellas, which is part of the mix when you write excess liability umbrella. You're covering that portion of the risk too, and you're seeing a reaction in the reinsurance market. It's not easy to find auto carve-outs anymore or the pricing is going up. So it's not an early indication that maybe GL might be a problem in the next year or 2, and then worker's comp maybe later on, and might create that environment that people, they say, "Hey,

we've got to adjust pricing in all 3 lines, going forward." I don't know. We can't predict the future, but I can tell you, there is stress in the system because it requires more rate increases than we're getting. And we're not keeping up with the trend, and it sounds to me like '98, '99 all over again that the frog is in the happy water, but the temperature is going up.

Marc Grandisson

President and Chief Operating Officer

And I think in addition, I would just add to what Dinos just said, the other dimension about the fear and greed is that underwriters of companies underwrite also with some kind of -- with the assumption of what the interest rates are going to be in the future. So the inflation goes up and interest rates goes up accordingly, if not, more. It might -- it generates all kinds of different behaviors. I would argue that even in this day and age, in the last 2, 3 quarters, there is probably an expectation of rate increases in the future that might explain why some of the pricing is still softening as we speak. So there's a lot of stuff. There's a lot of things moving in the marketplace. So there's more than 1 just number that drives everything.

Elyse Beth Greenspan

Wells Fargo Securities, LLC, Research Division

Okay, great. Do you guys have a forecast for mortgage industry NIW for 2017 and what share that would be for Arch?

Marc Grandisson

President and Chief Operating Officer

We have expectations, and then we do follow the MDA and the Freddie and Fannie, and we look at what they do, what they produce. So we would just look at the same data that you're looking at. In terms of NIW, we don't have -- we have, of course, projections we think we're going to be accomplishing, but we're not at liberty to share that. And frankly, we're going to be reacting to whatever market situation presents itself in the next year or so. So we don't spend much time, if you will, projecting what NIW is going to be in the market. We have a good place, a good positioning with our clients, and we try to do the best thing. And as we said before, our market share, over time, we expect might decrease in the low to mid-20s. So that also could be something that happens by attrition. I think they're moving.

Constantine P. Iordanou

Chairman and Chief Executive Officer

It's a pleasant surprise for us. I don't know if it's a surprise. It was -- basically, we didn't see much overlap between Arch MI and United Guaranty. There was only one major customer that -- both of us were significant participants, and they reduced our combined share just slightly in the first quarter. There was no other change from any other major customer, and that's why I talk about the resilience of the customer base of United Guaranty. And basically, we are trying to do the best job possible, not only to maintain the service at a very, very high-quality, but also improve up on it. And that's what I've been emphasizing to our staff. That's why I said, let's not focus on integration of cost savings upfront at the expense of customers. We're going to focus on excellent customer service, and over time, we're going to get very efficient in how we provide that. And I think you can do both if you're a well-managed company.

Operator

And our next question comes from the line of Sarah DeWitt of JPMorgan.

Sarah Elizabeth DeWitt

JP Morgan Chase & Co, Research Division

Just first a follow-up on the share buyback. I think you said you wouldn't buy back any stock in 2017. Just to clarify, if AIG did sell, you would not participate?

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

Well, there's optionality in there. It's a decision tree, basically. So -- but it's as I stated. But we're not going to be buying -- overtly, other than those possibilities, we're not going to be going out and...

Constantine P. Iordanou

Chairman and Chief Executive Officer

Buying back shares.

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

And buying back shares.

Constantine P. Iordanou

Chairman and Chief Executive Officer

Yes, our theme there, Sarah, is we always want to have flexibility on the balance sheet. Right now, our debt and hybrid is at about 27 point-something-percent, of which about 4.5% or so is short-term revolving facility. That doesn't give us a lot of capital credit with the rating agency. So at some point in time, my first action with excess -- or with excess capital, maybe I can reduce that down. And then we'll revisit this year, purchase in '18 and beyond. Don't forget, I don't know when AIG is going to decide to sell, so I can't answer that question. If they're selling in '17, we probably would -- likely, we will not participate, but if it's '18, that's -- it's an open question.

Sarah Elizabeth DeWitt

JP Morgan Chase & Co, Research Division

Okay, great. And then separately, I wanted to get your thoughts on some of the practices of the insurance brokers. Chubb was critical at some of their practices, particularly in London, and so there could be regulatory or customer backlash, and now they're being investigated by the FCA. So just let me get your thoughts on some of the practices and do you see any regulatory risk with your current distribution channel?

Constantine P. Iordanou

Chairman and Chief Executive Officer

Listen, at the end of the day, distribution cost is part of the business, been always part of the business, but some people view it as a transactional. I think it's more than that. Some of it is transactional. Some of it is advice and counsel, et cetera, and is all buried into some number. The ultimate arbiter of if that's fair or unfair or sustainable is the customers themselves. They know that both our revenue and the broker's revenue comes from only one source. It's out of premium they pay. So if they don't like what's going on, they have ways to change that. But at the end, that's a customer decision. Now you ask the regulatory question. We believe, at the end of the day that the insurance and reinsurance business is highly competitive, and we're strong believers in the free market. So at the end of the day, if the customer is satisfied and nobody is doing anything that is illegal, which the regulator have to say in it, let the market decide if it's fair compensation or unfair compensation and the buyer of the product is the person who counts the most.

Operator

And our next question comes from the line of Nicholas Mezick of KBW.

Nicholas J. Mezick

Keefe, Bruyette, & Woods, Inc., Research Division

So last year, you discussed the way to think about mortgage, earnings volatility as the micro or underwriting decision and the macro changes. Now you assigned 2/3 of the volatility on the micro and 1/3 on the macro. Given the different composition of the book today with UGC acquisition, how would you expect a change in either of those sensitivities?

Constantine P. Iordanou

.....
WWW.SPCAPITALIQ.COM

Chairman and Chief Executive Officer

Actually, what I said last year it was 70-30, not 66 and 2/3 and 33 and 1/3, but -- and I'm sticking to that 70-30 because we did analyze a lot of back data through the financial crises as to what was causing defaults and we compare it with other environments. For example, what happened in Canada, where all day no verification loans, et cetera. They were not allowed, and there was a minimum of 5% down payment requirement. And if you go historically and you see the performance of the Canadian book of business, it was much different even with the same economic conditions not only affecting the U.S. but affecting Canada and what the outcome of that business. So the 70-30 hasn't changed and what I'm saying -- what we're seeing, I think, the ability of MI companies to go back to the very loose underwriting standards that were common in -- during the financial crisis in '07 -- '06, '07, '08. In the future, that would be much more difficult. First of all, managements, they saw companies go bust, so their more resilient in -- on the risk management side of the business. And more importantly, I think the technology is much better today in analyzing individual mortgages and attributes that affect that. And also, more importantly, the GSEs, both Fannie and Freddie, with the [P. Meyer] approach and as regulators of the MI companies, they're a lot more resilient in their approach on maintaining stability on the balance sheets of the companies that they provide them the counter-party risk.

Marc Grandisson*President and Chief Operating Officer*

Right now, exactly what's going on. There's no change from last year, because, really, what drives the losses than we've seen historically is the products that were offered in the marketplace, and we've seen no change in the products offering. And to echo what Dinos just said about the GSEs being really wary, or at least, very attentive to what's happening in the marketplace, they had an increase in the -- for the discounted LPMI business as of last year, recognizing that, that might represent a bit more risk to the system. So there's really a heightened level and still a high level of scrutiny and attention paid to the product that are delivered in the business. So no change from last year.

Nicholas J. Mezick*Keefe, Bruyette, & Woods, Inc., Research Division*

And Dinos, apologies for misquoting you.

Constantine P. Iordanou*Chairman and Chief Executive Officer*

Well, no, I just like -- it's my test, as I'm getting old. I'm 67, but that still sane. I have...

Mark D. Lyons*Chief Financial Officer, Executive Vice President and Treasurer*

67, that's 2/3, 1/3.

Nicholas J. Mezick*Keefe, Bruyette, & Woods, Inc., Research Division*

Just one follow-up. Last quarter, you referenced your door being broken down by people wanting to get a piece of your business through reinsurance. I just wanted to check on the status of the door, and in turn, demands for the reinsurance of your portfolio, in particular, the MI book.

Constantine P. Iordanou*Chairman and Chief Executive Officer*

It hasn't changed, but like I said, we're here to feed our shareholders first. And then if we have extra, we can be charitable to others. This is good business. Within our risk management limitations, we will continue to have our shareholders in mind first, and then our reinsurance partners, and others, second.

Operator

And our next question comes from the line of Josh Shanker of Deutsche Bank.

Joshua David Shanker*Deutsche Bank AG, Research Division*

Following up on the last question. I want to know why it does or does not make sense to think about MI the same way we think about cat. Is there a PML that you have? Maybe you're not going to tell us what it is, but did you calculate something like that?

Constantine P. Iordanou*Chairman and Chief Executive Officer*

Yes, we do. We have -- you got to think on the concept of what is the [indiscernible] event, right, a severe recession, housing prices collapsing, et cetera. And we build these models that we model and then we calculate what, based on the book that we have, what the macroeconomic effect of those events. They don't happen like a hurricane that happens in one day and you know the next day. It's going to be more gradual. But at the end of the day, if you're writing the business, you've got to be cognizant of that. But we model that and we have a tolerance and the tolerance is no different that we don't want to commit on these, what I will call catastrophic events, more than a probability of us of losing 25% of our common equity cap. So that limitation is still there. It's a book limitation. I mean, myself and the rest of the management team, in our discussions with our board, they say we want to know what is the maximum loss that you're willing to have on a stress scenario, and we want to understand what that stress scenario is all about, and that's how we build our model around it. Mark, you want to elaborate there?

Marc Grandisson*President and Chief Operating Officer*

The only thing I want to add, Josh, is not exactly like a cat book of business because you're going to have future pruning coming in. So you have to factor in an S&P type of PML. So this is what Dinos is alluding to.

Constantine P. Iordanou*Chairman and Chief Executive Officer*

Right.

Marc Grandisson*President and Chief Operating Officer*

We have to factor that in, because it's part and parcel of what we're assuming as part of the policies, you know the policies. Those that don't default continue paying premium for the future and we have -- we take a credit for that as well. So just want to make sure it's not a one event, one-off event, that Dinos said, that happens overnight. It's an over 2 or 3-year period development, and we take an S&P type of approach.

Mark D. Lyons*Chief Financial Officer, Executive Vice President and Treasurer*

And Josh, I think just one other thing, it's a good question, especially given the relative size of its organization. But thinking wise, you got to learn from the past, I mean, anything that erupts that can cut across underwriting years. We learned from asbestos and the GL. We learned from environmental and the GL. We learned from P&L. Anything that could signal it, you can break it down. These lines have at least a component of cat. I think more so in the mortgage space, but we think about that in every line of business.

Joshua David Shanker*Deutsche Bank AG, Research Division*

So let's just take a scenario. I look at the business right now, not only well underwritten, but also well priced. And even if pricing were to decline it still might be well underwritten on the mortgage by mortgage level, therefore, avoiding the risk of "catastrophe". To what extent...

Constantine P. Iordanou*Chairman and Chief Executive Officer*

WWW.SPCAPITALIQ.COM

You're not avoiding the risk totally, the risk of catastrophe because even well-underwritten business, if you have higher unemployment, you're going to have hardships. Your default rate is going to go up. If you're going to have house prices collapse, that means the claims that you're going to have, they're going to cost you more. So at the end of the day, those, you can avoid. That's a part -- and I put that round number of 30% on the problem in the past crisis was macroeconomic events, which effected, for example, the Canadian book of business, but it didn't cost companies. Their profitability suffer, but they were still profitable, and they didn't go out of business. What caused collapses in the U.S., it was all these crazy stuff, like how do you underwrite an old verification law? You don't know the information you've getting is correct. How do you factor in these old days or 110 LTV stuff? And there was a lot of craziness that it went into the mortgage space at that time.

Joshua David Shanker

Deutsche Bank AG, Research Division

So when the cat market gets irrational, Arch can say, look, someone else can underwrite this business. There's 100 other companies who know how to write property cat, and let them chase the market down. When you're only...

Constantine P. Iordanou

Chairman and Chief Executive Officer

Exactly right.

Joshua David Shanker

Deutsche Bank AG, Research Division

When you're only one of 6 or 7 participants, what does that mean when the market gets irrational?

Constantine P. Iordanou

Chairman and Chief Executive Officer

Well, the market gets irrational, that means you got to maintain your discipline. Our hallmark as a company is that we have been disciplined underwriters. And as long as I breathe, this team which I have 1000% confidence is, they're going to be disciplined underwriters. It's our DNA. For better or worse, it's our DNA. The Arch DNA is disciplined underwriter. Be patient, disciplined, and at the end of it. And thank God, we got a board who understands that. I never, never had a discussion with my board that says, oh, your volume is suffering or -- they never talk about volume. They do talk about profit and margin, and are you taking undue risk. That, we talk all the time.

Marc Grandisson

President and Chief Operating Officer

Josh, I mean, the one thing that's -- it's unfair to really compare to a cat, because a cat, in January 1, I don't know that there's going to be a hurricane in September that hits Florida. But it's underwriting mortgage, and we have indeed and our company have the proper early warning systems in terms of risk quality. We can actually take actions way ahead of things percolating up. The decision as to where we put the redline or the yellow line as to when we start deemphasizing it, we do have access to that information. And frankly, and Dinos has said this in prior calls, if the people that were in the business in '06, '07, '08 had heeded those calls and those points and those clear indication signals in the marketplace, they wouldn't have put themselves in that position. So it's not like you wake up 1-day and the risk quality was as good as it gets, and overnight, everything goes down by 20% and the unemployment goes from 5% to 25%. I mean, you have a lot of products [indiscernible]. You have time to react.

Constantine P. Iordanou

Chairman and Chief Executive Officer

PMI was recognizing segments of their business into what we will call the red line, all the way back in 2004, and they did not take action. As a matter of fact, they increased their participation in everything that their monitoring systems, it was showing red, meaning, all [indiscernible] loans became 28% of their book of business because a lot of the customers, especially, countrywide, et cetera, it was threatening

them. It says, you don't write all the bad, you're not going to get the good. Well, I said this before, you give me 3 glasses of Kool-Aid and 1 has cyanide in it, I'm not drinking it. So even though the other 2 they're very refreshing and I'm very thirsty, I'm not drinking it. And basically, that's what the industry did. They were given 3 glasses, 1 had cyanide in it, and they downed all 3 of them.

Joshua David Shanker

Deutsche Bank AG, Research Division

I appreciate the image.

Constantine P. Iordanou

Chairman and Chief Executive Officer

I don't want to be graphic, but I tell you, when you're running a company and you got your shareholders' capital and you got 3,500 employees in your hands, you got to feel like I feel. You got to be very responsible, not only for the capital, but also for the welfare of the employees.

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

And Josh, that was 3 Kool-Aids, not 3 Bourbons.

Joshua David Shanker

Deutsche Bank AG, Research Division

The Bourbon would neutralize it, I'm sure.

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

But one other thing, if I could, Josh, and Dinos and Marc have talked about this before. But the history was that the MIS took all the risk on their balance sheet, 100% in, 100% retained. That's clearly not part of our strategy. That's the strength of the PC side. We can't think any other way than simultaneously managing balance sheet, and maybe Dinos, I'll kick it to you, but the benefit of going to capital markets and reinsurance as a leading indicator unto itself.

Constantine P. Iordanou

Chairman and Chief Executive Officer

You always have to have a loop to the market. So by purchasing reinsurance and capital markets products, you always have a compass as to how other people think about the product, are you pricing it well or not. If you can shed risk in an effective way, that tells you, you're the patsy. So you better start shutting the doors because you're not doing the right thing.

Operator

And our next question comes from the line of Brian Meredith of UBS.

Brian Robert Meredith

UBS Investment Bank, Research Division

A couple of quick ones here. First, Mark, can you tell us what was the impact of the AIG quota share on your premium this quarter? And just kind of trying to figure out kind of, going forward, how that's going to kind of play out.

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

Yes, we have that. Okay, hang on.

Constantine P. Iordanou

Chairman and Chief Executive Officer

Well, you want to know the session to the AIG?

Brian Robert Meredith

UBS Investment Bank, Research Division

Yes, the session to the AIG quota share. Was there anything unusual in this quarter that would have elevated it versus what it would look like going forward?

Constantine P. Iordanou

Chairman and Chief Executive Officer

No.

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

I'm trying to give you a ratio because I think that's what you're after. So bear with me.

Constantine P. Iordanou

Chairman and Chief Executive Officer

Well, you don't want to give him the amount.

Brian Robert Meredith

UBS Investment Bank, Research Division

Well, just you give me the dollar.

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

All right, that's okay. Okay [indiscernible]

Constantine P. Iordanou

Chairman and Chief Executive Officer

I don't want to give you the amount. He has that in front of him.

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

About 20%. Let me go up here. Yes, it's about 70% of the ceded premium. I was going to give you the cede of the net, but that's easier.

Brian Robert Meredith

UBS Investment Bank, Research Division

So about 70% of the ceded premium with AIG, okay.

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

Yes.

Brian Robert Meredith

UBS Investment Bank, Research Division

I'm trying to figure what that looks going forward. So that's kind of -- generally, when you think about it, it kind of just gradually kind of trending downwards over the next weeks. No?

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

No. I would think that would, over the next 3 to 5 quarters, could be trending up, and then trail down because of the nature of the monthlies and the litigation risk.

Constantine P. Iordanou

Chairman and Chief Executive Officer

Don't forget, the quota shares covers '15.

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

'14.

Constantine P. Iordanou

Chairman and Chief Executive Officer

'14, '15 and '16. So the United Guaranty book goes all the way to '07, '08. We have -- we still have mortgages all the way back from '07, '08. They're still paying premium. So it's not as easy to calculate it. But a lot of the old stuff will be coming off more of the newer stuff. There is not going to be a lot of -- depends on the persistency of those years, the '14, '15 and '16. We think that calculation is going to probably increase it a little bit and then it will come down later.

Brian Robert Meredith

UBS Investment Bank, Research Division

Got you. Okay. Helpful. And then second question, I'm just curious, when you talked about the expense savings, could we expect some in some of the other areas, reinsurance, insurance, also just given the relocation of the services of businesses operation?

Constantine P. Iordanou

Chairman and Chief Executive Officer

Well, the relocation, it's not that -- we're not going to just take a lot of people and relocate. We have attrition, right? Attrition usually is around 10% in our operations worldwide. So basically, we lose roughly about 300 positions every year. We decided that North Carolina is a better place for some of these back rooms that premium audit, some clearance system, some booking things, et cetera. So gradually, we'll be moving -- we lose a job here, instead of replacing it in, I don't know, high cost environment, we go into a lower cost environment. And that process has been with us all along. I mean, we have operations in Nebraska. We have operations overseas in other parts of the world. So that's ongoing. The reason I mention it is because, North Carolina, based on our statistics, is about -- it has about a 30% cost advantage over other -- from New York, New Jersey, California, let's say. So over time, and we're not trying to displace people, but as we lose people, we'll be moving that. So gradually, you're going to see that benefit coming through, but we do that as a -- on our day-to-day operations, as a matter of course, we do that all the time. I mean, that's what our managers are getting paid to do, make sure that we're cost effective.

Brian Robert Meredith

UBS Investment Bank, Research Division

Got you. And the last question, I wonder if you'd give us your perspective right now on the political landscape with respect to the mortgage insurance business, and particularly, related to the FHA. And if you get some changes going on there, what do you think the potential is for market share kind of shift back to the private MI, and what do you think UGC or Arch should get?

Constantine P. Iordanou

Chairman and Chief Executive Officer

Well, it's very hard to predict. Very hard to predict. Clearly, the FHA has more market share that they need. So I mean, you're not going to hear that only from me, from everyone. [MICO] will say that. It should be in the private sector not on the taxpayer. Having said that, I don't know what they're going to

do. The share of VA, FHA in combination is probably a little north of 55%. So that's way too much, in my view, to be on the public back.

Marc Grandisson

President and Chief Operating Officer

I think what I would add to this is there a lot of things that we also have available to us in terms of providing MI insurance, not only to primary, but there's clearly still an ongoing focus on deleveraging the GSEs and the MI to the third-party to private capital. That is not stopping. It's actually most likely going to be accelerating over the next year or 2. The one thing that we're thinking about collectively is we're agnostic as to, in general, how we would allocate the capital in terms of primary MI or CRTs to the extent that it shifts to that direction. But we're essentially able and willing to provide the risk on a private basis, every which way the FHA decides to go. But right now, we don't see any cost to be concerned in terms of the existence of the MI industry as it is. And we believe that the CRTs that we've been participating on are going to grow in size, and it's not going to be -- most likely, instead of the MI primary, it's going to be in addition to the MI market.

Operator

And our next question comes from the line of Ian Gutterman of Balyasny.

Ian Gutterman

Balyasny Asset Management L.P.

So Dinos, my first question is when you're planning this move to North Carolina -- no. Okay, well, tell me.

Constantine P. Iordanou

Chairman and Chief Executive Officer

What's for lunch, let me -- okay. It's at the request of Marc Grandisson, it will be grilled halloumi cheese from Cyprus with tomato, cucumber on pita bread and that's the lunch, the sandwich for the day, and he's salivating already. So get to your question, so he can go ahead and eat.

Ian Gutterman

Balyasny Asset Management L.P.

Well, my first question was when you made this decision to move all these people in North Carolina, did you make sure there was a good Greek restaurant in the neighborhood for them?

Constantine P. Iordanou

Chairman and Chief Executive Officer

I have a few cousins who might be interested in going down to open a Greek diner down there, but I'll leave it up to them.

Ian Gutterman

Balyasny Asset Management L.P.

Okay, okay. I actually had a couple of questions on the P&C business, but just on MI, quickly, first, to maybe ask a little bit of a take up on Josh's question and your response about the crazy conditions in the U.S. 10 years ago. Well, surely, it sounds like it's kind of getting to that point, and I know you've obviously bought some reinsurance to help manage your exposure there. But how concerned are you about the Australian market right now, and just the HPA just seems crazy, and you hear all these anecdotes about things going on to get loans or get houses, and so forth.

Constantine P. Iordanou

Chairman and Chief Executive Officer

Right. Well, let me -- I'm not -- you're always concerned of everything you do. So -- but I'm not fearful of the Australian business for 2 reasons. First and foremost, there seems to be a little frothy housing prices in 2 major cities, right? Having said that, the frothiness is on loans that they're larger than what

we ensure. These are in the million -- 750,000 and up market. So when you look at it from an exposure point of view, the things that we ensure, the more on the lower size of homes, and the Australian market is also a full recourse market, which is different than the U.S. So in essence, the individual is responsible for repaying the loan beyond the ability of the residual value of the house to make up for the loan over time. So it's a different characteristic to the market. In addition to that, I think, the OPRA, which is the regulator, who regulates both insurance and also the banks, they have some strict rules about what loans get approved, and the stress test they put them to be able to qualify for the loan. It's a 200 basis points stress test on every loan on interest rates movement, because a lot of the loans in Australia, they're -- are adjustable, so they're not -- they don't have these 15 and 30 year fixed rate mortgages. So Marc, you want to elaborate further on it or...

Marc Grandisson

President and Chief Operating Officer

I would agree with that. I think the portfolio, we, as a result as well, currently, right now, we are also looking at the same process. We have an economist who has spent a lot of time reviewing, and he confirms exactly what Dinos said, which is there's a couple of areas, part of a frothiness, but it's confined to the larger risk, the larger dwellings, the larger condominiums and also a lot of investors coming from outside, which is...

Constantine P. Iordanou

Chairman and Chief Executive Officer

They pay cash. They don't buy insurance.

Marc Grandisson

President and Chief Operating Officer

Exactly. And even if they were -- what we tend to focus on are the lower risk, and we don't do the investors loan as much. So we've curtailed and shifted the portfolio towards the more single dwelling, owner occupied house down under. And to your point, we feel, despite all these still, despite all these going on about the quota share, and we've got partners there to help us in case we were -- we would be a bit too optimistic. We don't think we are, but just to be prudent in terms of rightsizing the whole portfolio. So we're cautiously optimistic. We're comfortable.

Ian Gutterman

Balyasny Asset Management L.P.

All right. Got it. That makes a lot of sense. On the P&C business, Mark, the insurance segment, the reserve releases were pretty de minimis this quarter. Was that less sort of gross releases? Or was it sort of the normal manner of releases and there were some adverse and pockets offsetting it?

Marc Grandisson

President and Chief Operating Officer

I think the latter. I think that we are seeing, as we -- as I said in my comments, and as Dinos and Mark both alluded to, the market we're seeing pickup and severity in the markets across lines of business. Certainly, it started in the commercial auto, and you've heard that story more than once.

Constantine P. Iordanou

Chairman and Chief Executive Officer

And the auto component in umbrellas.

Marc Grandisson

President and Chief Operating Officer

Exactly as well. So there's a lot more coming. We're of the mind that it's going to get a bit more, a bit worse before it gets better again. So we tend to take, as usual, a prudent approach to reserving. So we might take a bit more long to recognize what looks like good news. Because frankly, a lot of people around our clients, so we've seen that some of them have, we believe, recognize too early good news and are in

a position to having to redirect or re-correct that, and we would like to avoid that at all cost. So there's a little bit of -- some activity and some severity, some activity and some losses coming through, but certainly, a holistically corporately more prudent view on the ultimate reserve development.

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

And Ian, that's a direct benefit from the multi-platform we have, and that the holding company guy see. So you can see other ceding companies and fear on the insurance that way.

Ian Gutterman

Balyasny Asset Management L.P.

Understood. And then sort of similar to that is the higher accident years in both the insurance and the reinsurance, other than, I guess, probably the elevated fact losses, is this sort of a reasonable run rate, given where rate and mix is, I mean, unless the mix changes pretty dramatically?

Constantine P. Iordanou

Chairman and Chief Executive Officer

It's our best guess for the current accident year. I mean, listen, the first year is a self-grading exam and we try to do the best we can. But I can tell you, things are not as good as they were a year ago, and that's a reason you got to recognize on the current accident year, right?

Marc Grandisson

President and Chief Operating Officer

Ian, again, that, what I just talked about the reserve development, what transpired in the last quarter informs us in going forward as to where we think the ultimate underlying fundamentals of the business is. And as you heard, we're losing margin and it's being eroded as we speak. So it woes us to do the right thing, which is to be, again, that much more prudent on the current accident year. That's what you see right now.

Ian Gutterman

Balyasny Asset Management L.P.

And then just finally, on that, Dinos, I think you mentioned earlier, some may be rhyming with parts of the late '90s and the one thing, I guess, I noticed looking at reserves across the industry, I'm assuming you guys have looked at these sort of trends. It looks like there's the initial ID&R has been coming down every year for the past 3, 4, 5 years, and it's now getting to a pretty low point. Do you agree with that trend? Does that concern you that even the loss trend has been benign the last 5 years? It seems to be now reflected in ID&R?

Constantine P. Iordanou

Chairman and Chief Executive Officer

Yes...

Ian Gutterman

Balyasny Asset Management L.P.

I'm asking from an industry standpoint...

Constantine P. Iordanou

Chairman and Chief Executive Officer

Give me another month or two. We're going to finish our study. I do this macro study with Don Watson about the industry reserve levels and all that. I look at cash flows, underwriting cash flows, et cetera. Give me a little time, and then we'll share that study with you. Maybe that might be my 5 minute in Investor Day because the guys want me to only have 5 minutes with you guys. They want to put me with the Chef, so I'll be grilling -- but at the end of the day, I think it's an interesting question. Yes, it feels to me,

from other indications. Let me give you an example. Let me give you an example. I won't mention names because it's embarrassing. But we lost an account, right? That it was a high deductible account that, in essence, it was about \$10 million in premium and we lost it to a competitor for \$3 million. To me, it's the definition of insanity. I mean, either you're totally naive, you don't know what you're doing or you can beat me by going to \$9 million. You don't have to go from \$10 million to \$3 million to get the account. So that means they're uninformed, don't understand what they're doing, and the brokers are taking advantage of them, because I can tell you, they never knew that the expiring premium was probably \$10 million.

Mark D. Lyons

Chief Financial Officer, Executive Vice President and Treasurer

And the other thing, Ian, on that, that will be in their renewal pricing monitor. And next year, when they raise it to \$4 million, that's a 33% increase.

Operator

And our next question comes from the line of Jay Cohen of Bank of America Merrill Lynch.

Jay Adam Cohen

BofA Merrill Lynch, Research Division

My questions were answered. I tried to hit the right button to remove myself, but I failed.

Constantine P. Iordanou

Chairman and Chief Executive Officer

We'll continue to try to perform for the shareholder.

Operator

Thank you. And I would now like to turn the conference over to Mr. Dinos Iordanou for final comments.

Constantine P. Iordanou

Chairman and Chief Executive Officer

Well, thank you, all, for your attention, and looking forward to talking with you next quarter. Have a wonderful afternoon.

Operator

Ladies and gentlemen, thank you for participating in today's conference. This concludes the program. You may all disconnect.
